Career Objective

Computer Science Engineering student specializing in Artificial Intelligence and Machine Learning, with hands-on experience building full-stack web applications and integrating LLM-powered features. National-level hackathon participant (top 60 of 700+ teams) seeking opportunities to apply and grow my technical skills and build innovative AI-based solutions.

Education

A J Institute of Engineering and Technology , Mangaluru	<i>Expected 2028</i>
B.E. in Computer Science and Engineering (Artificial Intelligence and Machine Learning)	CGPA: 9.33
BGS Composite PU College , Gandhinagar, Kavoor	
Pre-University Course (PCMB)	Percentage: 95%
Holy Family English Medium School , Surathkal	
SSLC	Percentage: 97.6%

Skills

Programming Languages: Python, Java, JavaScript, TypeScript, SQL, HTML, CSS
CS Fundamentals: Data Structures & Algorithms, Object-Oriented Programming (OOP), Operating Systems, DBMS
AI / LLM: Groq API (Llama 3.3), LLM Integration, Prompt Engineering
Frontend: React.js, Tailwind CSS, Vite, shadcn/ui, React Router, React Hook Form, Zod, TanStack Query, Recharts, Axios
Backend: Node.js, Express.js, FastAPI, RESTful APIs, Supabase (Auth, Storage, Realtime, Edge Functions)
Databases: PostgreSQL, SQL, Row Level Security
Tools & Deployment: Git, GitHub, Netlify, Vitest, Resend API
Languages Known: English, Kannada, Tulu

Projects

CampusFind – College Lost & Found Hub	GitHub Live Demo
<i>React, TypeScript, Vite, Tailwind CSS, Supabase, PostgreSQL</i>	
- Built and deployed a full-stack lost-and-found platform where students report lost or found items, browse and filter listings, and submit ownership claims with proof. - Implemented authentication and role-based access (student and admin) using Supabase Auth, with database access protected through Row Level Security policies. - Developed an admin dashboard to approve or reject claims, with realtime in-app notifications (Supabase Realtime) and automated email alerts via Edge Functions and Resend. - Added image uploads with Supabase Storage, form validation with React Hook Form and Zod, and a responsive UI; tested with Vitest and deployed on Netlify.	
Agent OPSYN – AI-Powered DevOps Assistant (Team Project, Frontend)	
<i>Agentic DevOps assistant integrating GitHub, Notion, Jira, Slack and Datadog</i>	
- Developed the frontend of a privacy-first agentic DevOps assistant that acts as a unified command terminal to diagnose incidents and generate automated runbooks. - Worked within a 4-zone architecture (Ingest, Know, Reason, Act) in which high-risk infrastructure actions require human approval.	
MediTrack AI – Smart Personal Health Records Manager	GitHub
<i>React.js, Node.js, Express.js, PostgreSQL, Groq API (Llama 3.3)</i>	
- Built a full-stack health records manager for tracking doctor visits, medications, lab results and daily symptoms, with 16 REST API endpoints supporting full CRUD operations. - Designed a normalized PostgreSQL database of 6 tables with foreign key and CHECK constraints and cascade deletes to maintain data integrity. - Integrated Groq’s Llama 3.3 model to generate plain-English health summaries by feeding recent visits, active medications and lab results into a structured prompt. - Implemented automatic HIGH/LOW/NORMAL flagging of lab results and interactive Recharts trend charts to visualize lab values over time.	
DocLink – Appointment Management Dashboard	
<i>React, TypeScript, Vite, Tailwind CSS, shadcn/ui, Recharts</i>	

- Developed a responsive admin dashboard for scheduling appointments and managing doctors and patient records, with an analytics view built using Recharts.
- Managed data with React Query and React Router, and implemented type-safe form validation with Zod and reusable shadcn/ui components.

Hackathons & Achievements

- **Hackfest'26** (National Level), NMAM Institute of Technology, Nitte – Team selected as one of the top 60 out of 700+ registered teams. *2026*
- **Smart India Hackathon (SIH) – Internal Round**, A J Institute of Engineering and Technology – Selected to advance to the next round.

Certifications & Workshops

- Smart IoT Systems Design: Hands-On Prototyping with ESP32 (3-day workshop)
